

MOVING TO THE CUSTOMER’S BEAT

Tranz Logistics provides both wet and dry hire of its extensive fleet of transport equipment with a focus on high level client facing service.

Its fleet is used in mining, oil and gas, infrastructure, road construction and major civil projects across Australia and includes oversize and over-dimensional loads capability and high performance Palfinger cranes.

Tranz is committed to finding the best solutions in order to meet any industry or mine specific requirements. The company works closely with customers to ensure all equipment meets the requisites for the job to the extent of providing customized equipment to meet specialized conditions.

Taking a safety-first approach, all hire equipment includes installation of advanced technology such as in-vehicle monitoring systems (IVMS), GPS tracking and fatigue management systems for high level safety performance. All technology can be installed and integrated where required for individualised job conditions.

Recently installed safety features include fire suppression systems, five-way camera systems and motion sensors on its fleet of crane trucks.

The motion sensors detect objects and will halt the movement of the crane to remove the possibility of damage.

The Fire control system Fog Maker is installed in tunnel vehicles to minimise injuries, along with the proximity detection device for collision avoidance.

Tranz offer a specialist Tunnel Logistics service with customised supply chain solutions relying on its teams’ deep knowledge and expertise built on long term partnerships with clients.

Tranz Logistics work with experienced engineers to offer safe and reliable equipment hire and operators to deliver the results customers expect.

Its considerable experience in tunnelling services includes the hire of all equipment

as well as supplying operators that have the experience to work productively and safely in the underground environment.

The company has operated on many major tunnelling projects across the eastern seaboard including North Connex and West Connex in Sydney, the Melbourne Metro and West Gate Tunnel in Melbourne and the Narrows crossing pipe tunnel and Brisbane Airport Link in Queensland.

Tranz Logistics also offer a specialised service to handle chemical logistics and dangerous goods transportation for hard rock mining and other industries that deal in dangerous chemicals and toxic waste.

The company’s service focussed providers include Tranz Logistics, Tranz Renewables, Tranz Warehousing and Tranz Moves.

Tranz Renewables seeks to meet all the requirements for providing equipment in the construction and maintenance of hybrid renewable technologies, combining expertise in stevedoring, logistics and renewable solar handling, with equal expertise in crane hire, heavy haulage, and wind farm component logistics.

The company has been established in Australia wide for over 20 years and is now looking to expand into South East Asia, Middle East and Europe. **AMR**
